**Hiring Manager**

Postman

San Francisco, CA

Dear Hiring Manager,

I'm excited to apply for the **Forward Deployed Engineer** role at Postman. As a full-stack engineer and AI product builder, I've spent the last two years developing GenAI-powered applications and API-first solutions that bridge the gap between technical execution and real-world customer needs, precisely the kind of work Postman champions.

At **Majorly**, an AI career coaching platform, I led the end-to-end development of multiple production-grade GenAI features, including a real-time interview coach and resume analyzer. I architected and deployed scalable RAG pipelines and agentic AI workflows (FastAPI, LangGraph, FAISS), achieving >90% retrieval accuracy and sub-1.2s response times. I also implemented observability frameworks using Arize and Helicone to continuously optimize model performance. These systems not only improved user outcomes but drove a 40% increase in engagement in the first month.

In parallel, I've worked with startups like **SprintFit** and **SowFin** to build high-leverage tools: a VC pitch-deck evaluator that reduced diligence time by 70%, and a CFO assistant powered by LLaMA-3.2 for querying business data via natural language. These experiences honed my ability to rapidly prototype, validate, and iterate on solutions with both technical and non-technical stakeholders, often under ambiguity and tight timelines.

What excites me most about this role is the chance to work directly with strategic customers and Postman's internal teams to bring new 0→1 API products to life. I'm Postman API Fundamentals certified and deeply aligned with the API-first vision, having used Postman extensively for testing, monitoring, and documentation across my projects.

I'd love the opportunity to bring my full-stack skill set, customer focus, and product thinking to Postman's Forward Deployed Engineering team. Thank you for considering my application, I look forward to the possibility of collaborating to build the future of APIs.

Warm regards,

**Akshay Danthi**
